CONCEPT

The use of containers as a building material has grown in popularity over the past several years due to their inherent strength, wide availability, and relatively low expense. Homes have also been built with containers because they are seen as more eco-friendly than traditional building materials such as brick and cement.

At Ravestein you can find new end/or used Container Pontoons. Ravestein Container Pontoons are available for hire, lease or purchase. Just click on the different Container Pontoon types, and detailed information is available. Of course we like to help you if you have any questions about Container Pontoons!

The Ravestein company is market leader; we build all types of pontoons.

Ravestein designed an entirely new system for connecting pontoons, known as the dovetail coupling system. The incentive behind the dovetail coupling of pontoons came from questions from the market, and the experience acquired in constructing connectable pontoons on commission. The new coupling system had to replace existing systems. It had to be better, stronger and easier to use. Another condition was that it had to be efficient and economical.

This lead to an innovation process which resulted in pontoons shaped like standard ISO containers, which can be coupled together using wedge shaped (male and female) dovetail couplings. The top couplings have a pin to prevent the pontoons from sliding loose once they have been coupled. The couplings are welded into the pontoon shell in such a way that various configurations are possible.

1 WOOD

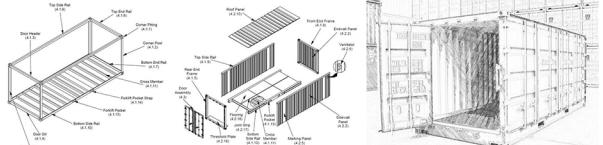

Wood has a long history of being used as fuel,[37] which continues to this day, mostly in rural areas of the world. Hardwood is preferred over softwood because it creates less smoke and burns longer.

Adding a woodstove or fireplace to a home is often felt to add ambiance and warmth

2 containers

Shipping container architecture is a form of architecture using steel intermodal containers (shipping containers) as structural element. ... Homes have also been built with containers because they are seen as more eco-friendly than traditional building materials such as brick and cement.

MATERIAL AND BUILDING TECNIQUE

4 container roof - SteelMaster provides an economical solution for a varie needs by adding a roof between two shipping containers, also known as Conex boxes or ISO containers, with our innovative steel container cover kits

5 bench economic - Economic systems can be categorized into four main types: traditional economies, command economies, mixed economies, and market economies

1. Economic Wall - The wall comes with many costs, some obvious though hard to estimate, some unforeseen

2 flooring - Black marble

3 chair and table Concrete
